

- Specially designed to intercept unique Motorola iDen telephone technologies.
- Conducts wiretaps on Push to Talk, iDen to iDen (interconnect) and Dispatch call events.
- Licensed for decoding of proprietary Motorola Vselp data packets.
- Flexible platform serving up to 24 channels of live wiretap voice and data.
- Simultaneously conduct up to 500 Pen register (data only) phone number intercepts.
- Manages data and voice connections to Motorola iSG (iDen Surveillance Gateway) and Nortel SDM servers.
- Records voice on local server drive or Raid in Windows compatible WAV files.
- Interconnects with XWARS Enterprise Solution database for logging of intercepted calls.
- Links real-time Voice Over IP voice and data to multiple SWAT surveillance workstations.
- Scalable design allows cascade of COPS iDen Wiretap Servers for expansion above 24 channels.
