

- **Surveillance Workstation Audio Technology (SWAT)** serves as an audio monitor workstation in a surveillance room.
- Receives "live" voice and data from the COPS servers using VOIP technology.
- Plays live voice of targets under surveillance on PC sound card.
- Includes a built in text editor so monitors can enter logs of call events and details.
- Offers direct access to a Call Event database for immediate recall of previously captured calls.
- Displays database event images or mapping feature during call events.
- Handles up to 16 channels (lines) per workstation.
- Allows monitors to listen to multiple channels / phone lines using call selector feature.
- Provides new call alert, allowing monitor to select which conversation to monitor live.
