

Attention Bartec Product Users!

The days of conducting your investigations with the support of Bartec Corporation may be in the **PAST**, but that doesn't mean your Bartec products must be retired. Cross the bridge to the **FUTURE** of telephone surveillance with the **Product Assistance Support Transition Program** from XLence Technologies...and bring your Bartec products with you!

What Is PAST?

XLence Technologies developed the **Product Assistance Support Transition (PAST)** program to serve as a "bridge" between Bartec and XLence. With **PAST**, investigators can continue to use their Bartec equipment with confidence as they move towards the next generation telephone surveillance technologies XLence has to offer. **PAST** involves a comprehensive hardware upgrade and maintenance check on Bartec equipment. This will reinstate warranty service for 90 days and ensure continued telephone technical support for one full year from the date of service.

PAST Performance

Return your SSL-12 Smart Slaves and Micro Dialed Number Recorders to XLence. After receiving a signed order confirmation, our technicians will upgrade your equipment with a new lithium battery, replace the program chip, and run complete unit test and calibration. Turn around time for the upgrade is typically one week or less. Cost is \$295 per unit plus return shipping charges. **PAST** charges are invoiced at Net 10 days with a purchase order or may be paid with Visa or MasterCard.

PAST Is A PRESENT To You!

XLence's **PAST** program offers you the opportunity to be pro-active with preventative maintenance on your Bartec products. You can extend the life of your equipment and make an easy transition to being an XLence customer as you continue to receive technical support from our team. You will be prepared for the requirements and challenges of your job without having to scramble for working equipment or tech support. And you will have an opportunity to cross the bridge to new surveillance technologies at your leisure. It's all about making your work and your life easier - what better present can you give yourself?

What's In The FUTURE?

The future of your telephone surveillance investigations lies with XLence Technologies! XLence acquired Bartec Corporation and is building upon the solid technologies developed by Bartec to produce high-quality, technically advanced equipment and software for local, state and federal law enforcement agencies. XLence offers turnkey pen register, wiretapping, cellular tracking and database management solutions with adaptable, affordable purchase, lease and usage-based programs designed to meet your needs. When you demand XLence, you receive excellence in sales, service and support.
